

LISAM SYSTEMS

Global IT Solutions in Environment, Health & Safety

ExESS® Chemical Management

Flexible and intuitive, ExESS Chemical Management System offers you an extended set of smart functions dedicated to optimizing the day to day management of your chemicals.

Open System

ExESS has been developed to allow communication and information exchange with third-party software. Whether this includes import of data from your ERP-system or e-danger profile from a third-party software labeling information, ExESS can be easily adapted to your own needs.

Calculation System

Based on your compositions, automatically calculate the danger profiles of your mixtures (GHS, CLP, ADR, JIS,...), according to the rules established in your region. Activate the automatic detection of substances in your compositions belonging to specific lists (use restrictions, authorizations, allergens...).

Analysis System

Use ExESS as a real analysis tool for your products. Build your own search criteria then export your reports instantly as a spreadsheet file. The possibilities are unlimited.

Dynamic System

Don't miss any regulatory change! Thanks to its frequent updates, ExESS organizes the regulatory monitoring for you and adapts its set of tools accordingly. In a similar way, our phrase databases are constantly improved and enriched with new translations.

Information System

Create a full inventory of your substances and mixtures. Precisely itemize the product information using the hundreds of predefined information fields, organized in grids and detailed forms (SDS, labels, classification forms,...). Download more information from our own data management tool (OEL Database, CLP Annex VI, Reach Candidate List,...).
