ExESS® SEVESO

The ExESS Seveso module will help you to identify and calculate the quantities of dangerous products in your establishment for the preparation of adequate and relevant emergency plans or response measures.

Automatic Calculation

ExESS Seveso boasts a dynamic and accessible calculation tool to work out the applicable Seveso category for substances subject to Annex I part II of the Seveso directive.

Find your matches through our integrated database of named dangerous substances to accelerate the calculation results and assess your legal obligations on the basis of the Upper or Lower Tier.

Report Generation

Once the category calculated, ExESS allows for the generation of detailed technical or calculation reports in the format of your choice.
